

HOSPITAL-PATIENT APPOINTMENT SYSTEM CONCEPT NOTE

Section 1: Basic Project Information

Student Name: Mukhaye Bridget Angela

Registration Number: MAY24/BIST/4300U

Project Title: Hospital-Patient Appointment System: A Mobile Application for Healthcare Appointment Management

Theme/Slogan: *"Healthcare Appointments Made Simple and Accessible."*

Target Users/Audience:

- Patients seeking healthcare services
- Doctors and healthcare practitioners
- Hospital administrators and reception staff
- Clinics and healthcare facilities

Section 2: Application Description

The Hospital-Patient Appointment System is a mobile application designed to simplify and improve healthcare appointment scheduling and management. The application enables patients to register, search for available doctors, book appointments, reschedule appointments, and receive reminders directly from their mobile devices. Healthcare providers can manage appointment schedules, update availability, and monitor patient bookings efficiently. Hospital administrators can oversee appointments, manage users, and generate appointment records for operational purposes. The system aims to eliminate challenges associated with traditional appointment booking methods such as long queues, scheduling conflicts, missed appointments, and poor communication between patients and healthcare providers. Developed using Java, XML, and SQLite in Android Studio, the application provides a user-friendly and efficient platform that improves healthcare service delivery, enhances patient satisfaction, and supports digital transformation in healthcare institutions.

Section 3: Core Functionalities

Feature 1: User Registration and Login

Patients, doctors, and administrators can create accounts and securely log into the system.

Feature 2: Doctor Availability Viewing

Patients can view available doctors, specialties, and appointment schedules.

Feature 3: Appointment Booking

Patients can book appointments based on available dates and time slots.

Feature 4: Appointment Management

Users can reschedule or cancel appointments when necessary.

Feature 5: Notifications and Reminders

The system sends appointment confirmations and reminders to reduce missed appointments.

Feature 6: Doctor Schedule Management

Doctors can manage availability and view assigned appointments.

Feature 7: Patient Records and Appointment History

Patients can view previous appointments and appointment details.

Section 4: User Flow & Activities

Primary User Journey

1. User launches the application.
2. User registers or logs into the system.
3. User accesses the home dashboard.
4. User views available doctors and schedules.
5. User selects a doctor and preferred appointment time.
6. User confirms the appointment booking.
7. System stores appointment details and sends confirmation.
8. User receives reminders before the appointment date.

Key Screens Sequence

1. Splash Screen
2. Login Screen
3. Registration Screen
4. Home Dashboard
5. Doctor List Screen
6. Appointment Booking Screen
7. Appointment Confirmation Screen
8. Appointment History Screen
9. User Profile Screen

Part 2: UI/UX Design Specifications

Section 5: Design System

Color Palette

Element	Color
Primary Color	#1976D2 (Blue)
Secondary Color	#42A5F5 (Light Blue)
Accent Color	#4CAF50 (Green)
Background Color	#FFFFFF (White)
Text Color	#212121 (Dark Gray)

Typography

- Headings: Roboto Bold
- Subheadings: Roboto Medium
- Body Text: Roboto Regular
- Buttons: Roboto Medium

Icon Style

- Material Design Icons
- Modern and Minimalist Style
- Filled Icons for Navigation
- Outline Icons for Secondary Actions

Section 6: Screen Designs & Mock-ups

Screen 1: Splash Screen

Displays the application logo and slogan while the application loads.

Screen 2: Login Screen

A mockup of a login screen. At the top, there is a blue header with a user icon and the word 'Login'. Below the header, the text 'Sign in to manage appointments and view your profile.' is displayed. The main content area contains two input fields: 'Email' with the placeholder text 'you@example.com' and 'Password' with a masked password '*****'. Below the input fields, there are two buttons: 'Login' (blue) and 'Register' (light blue). At the bottom, there is a link that says 'Forgot password? Use the registered email to recover access.' Below the form, there is a small text label: 'Validation: email format, inline messages, disabled submit until valid.'

Allows registered users to securely access the application using their credentials.

Screen 3: Registration Screen

A mockup of a registration screen. At the top, there is a blue header with a user icon and the word 'Register'. Below the header, the text 'Create an account to start booking appointments.' is displayed. The main content area contains three input fields: 'Full name' with the placeholder text 'Jane Doe', 'Email' with the placeholder text 'you@example.com', and 'Password' with the placeholder text 'Choose a password'. Below the input fields, there are two buttons: 'Create Account' (blue) and 'Sign in instead' (light blue). At the bottom, there is a tip that says 'Tip: Use a valid email — we'll send confirmations and reminders there.'

Enables new users to create accounts by providing personal and contact information.

Screen 4: Home Dashboard Screen

Serves as the main navigation hub where users can access appointments, doctors, and profile information.

Screen 5: Appointment Booking Screen

Allows patients to select a doctor, date, and time slot and confirm an appointment
